## TECHNICAL DATA SHEET

**PRODUCT TYPE : CALFORD R-286-14**

**PRODUCT CLASS : DISPERSABLE CLAY**

### **DESCRIPTION:**

**Calford R-286-14** is a 100% active, zinc free slab dip designed for use in rubber processing. **Calford R-286-14** is a blend of soaps, dispersing agents, emulsifiers and silicates. It produces a stable dispersion with excellent covering and anti-stick properties. It is especially recommended for rubbers which are difficult to coat because of their poor wetting properties (i.e. those with high surface tension).

### **PROPERTIES:**

Appearance : Beige coloured powder  
Total ash : 66 %  
Specific Gravity : > 1.5  
pH of 3% dispersion : 8.4

### **APPLICATION:**

- 1.The suggested usage level is 2.5%-4.0% in water. Dispersions containing lower concentrations tend to settle. Higher concentrations will create drying problems.
2. The dispersion should be prepared in a tank fitted with a stirrer. Continue to mix for at least a half hour after the powder has been dispersed. Only then will the dispersion have the desired viscosity and be ready for use.

### **PACKAGING:**

4 ply paper bags - 25kgs

### **HANDLING:**

For handling instructions refer to Material Safety Data Sheets.
